Project designers shall use an energy model to aid in determining the most energy- efficient design of a project and to demonstrate compliance with sections 4.1.2 (Baseline Standard - Renovations) or 4.1.3 (Baseline Standard - New Construction), of this manual, whichever applies.

Sustainable Design Manual

PART -1 ESTIMATING HOT WATER DEMAND. An adequate supply of hot water is a must for showers, kitchens, bathrooms, washing machines, dishwashers and other appliances in homes, motels, hotels or commercial buildings. Users expect hot water in adequate amounts, just as they expect lights at the flick of a switch.

Design Considerations for Hot Water Plumbing

This is the fourth edition of the Water System Design Manual. Many Department of Health (DOH) employees provided valuable insights and suggestions to this publication. In particular, we are proud to recognize the members of the group at the Office of Drinking Water who worked over many months to revise this edition of the design manual:

SERVICE MANUAL - Aqua-Hot

Gravity Circulating Heating System. In a hot water gravity heating system the circulation of water is a result of the density difference between hot water in the supply lines and cold water in the return lines.. The hot water tends to flow upwards and cold water tends to flow downwards. The elevation of the supply and return lines are therefore important for proper functionality.
