Common designs use spline lengths of $0.75 D$ to $1.25 D$, where D is the pitch diameter of the spline. When these standard lengths are used, the shear strength of the splines will exceed that of the shaft from which they are made.

Read Book Metric Spline Shaft Dimensions

The external spline can be formed either by hobbing or by a gear shaper. Internal splines are formed by broaching or by a gear shaper. To control tolerances, the minimum effective space width and the minimum major diameter of the internal spline are held to basic dimensions. The external spline is varied to obtain the desired fit.
